Oracle ebs java forms not opening pdf file online file

The Oracle EBS/Forms correlation library defines the correlation rules for Oracle EBS/Forms-based applications. The correlation rules specify the variable names and regular expressions to use to replace dynamic data in Oracle EBS/Forms applications and navigations. The default Oracle EBS/Forms correlation library provided with the OpenScript Oracle EBS/Forms Load Test Module includes the following correlation rules: formsload.location - Variable Substitution - this rule locates text in the HTML matching the Regular Expression pattern document.location='(.+?)' and replaces it with the variable name formsload.location in all locations. EBS Link and Form Action - DOM Correlation - this rule implements the Web Document Object Model correlation rules for Links and Form actions for Oracle EBS/Forms applications. ICX Ticket 111 - Variable Substitution - this rule locates text in the HTML matching the Regular Expression pattern icx_ticket%s*=?|'|)(.+(?:'|) and replaces it with the variable name formsload.icx_ticket_111 in all locations. ICX Ticket R12 - Variable Substitution - this rule locates text in the HTML matching the Regular Expression pattern icx_ticket&gv15=(.+)& and replaces it with the variable name formsload.icx_ticket_r12 in all locations. ICX Ticket R12s - Variable Substitution - this rule locates text in the HTML matching the Regular Expression pattern gv15s*=?|'|)(.+(?:'|) and replaces it with the variable name formsload.icx_ticket_r12s in all locations. JSLaunchForm - Variable Substitution - this rule locates text in the HTML matching the Regular Expression pattern href="javascript:launchForm('(.+?)')" and replaces it with the variable name formsload.launchform in all locations. formsload.module - Variable Substitution - this rule locates text in the HTML matching the Regular Expression pattern and replaces it with the variable name formsload.formsvr.CONFIGURATOR.session_key in all Requests and Responses locations. formsload.formsvr.CONFIGURATOR.icx_session_ticket - Oracle/EBS Forms Load Variable Substitution Forms-Http - this rule locates text in the HTML matching the Regular Expression pattern <param name="icx_session_ticket">(.*?)</param> and replaces it with the variable name formsload.formsvr.CONFIGURATOR.icx_session_ticket in all Requests and Responses locations. formsload.formsvr.CONFIGURATOR.creation_date - Oracle/EBS Forms Load Variable Substitution Forms-Http - this rule locates text in the HTML matching the Regular Expression pattern <param name="config_creation_date">(.*?)</param> and replaces it with the variable name formsload.formsvr.CONFIGURATOR.creation_date in all Requests and Responses locations. formsload.formsvr.CONFIGURATOR.model_lookup_date - Oracle/EBS Forms Load Variable Substitution Forms-Http - this rule locates text in the HTML matching the Regular Expression pattern <param name="config_model_lookup_date">(.*?)</param> and replaces it with the variable name formsload.formsvr.CONFIGURATOR.model_lookup_date in all Requests and Responses locations. formsload.formsvr.CONFIGURATOR.requested_date - Oracle/EBS Forms Load Variable Substitution Forms-Http - this rule locates text in the HTML matching the Regular Expression pattern <param name="requested_date">(.*?)</param> and replaces it with the variable name formsload.formsvr.CONFIGURATOR.requested_date in all Requests and Responses locations. formsload.formsvr.CONFIGURATOR.client_header - Oracle/EBS Forms Load Variable Substitution Forms-Http - this rule locates text in the HTML matching the Regular Expression pattern <param name="client_header">(.*?)</param> and replaces it with the variable name formsload.formsvr.CONFIGURATOR.client_header in all Requests and Responses locations. formsload.formsvr.CONFIGURATOR.client_line - Oracle/EBS Forms Load Variable Substitution Forms-Http - this rule locates text in the HTML matching the Regular Expression pattern <param name="client_line">(.*?)</param> and replaces it with the variable name formsload.formsvr.CONFIGURATOR.client_line in all Requests and Responses locations. formsload.formsvr.CONFIGURATOR.warehouse_id - Oracle/EBS Forms Load Variable Substitution Forms-Http - this rule locates text in the HTML matching the Regular Expression pattern <param name="warehouse_id">(.*?)</param> and replaces it with the variable name formsload.formsvr.CONFIGURATOR.warehouse_id in all Requests and Responses locations. Client Set Cookie - Client Set Cookie - this rule set the client cookie. formsload.formstep.THINKTIME - Oracle/EBS Forms Load Step Generation - this rule is used to generate think time in script step groups. This post covers solutions for the issue while trying to access Oracle forms in Oracle E-Business Suite (R12.2) & how to troubleshoot it with a complete solution. So let's first understand about Oracle Forms, it can be configured in two modes: servlet and socket. In servlet mode, a Java servlet (called the Forms Listener servlet) manages the communication between the Forms Java client and the OracleAS Forms services. In socket mode, the desktop clients access the Forms server directly. To know more about Oracle Forms check our post Oracle Apps R12 Forms: Servlet or Socket Issue: We were trying to access System Administrator -> Define Profile Options but Java plugins were not working due to which forms are not opening: Note: Apps 12 is based on Forms 10g and is configured to run in servlet mode by default. Also check: Steps to download EBS R12 software from Edelivery Oracle site Fix: 1. Copy the URL that you are unable to open. In our case 1704ebs54.k21technologies.com:8000 2. Open the Control panel, then search for Java and click on that. 3. Click on Security 4. Click the "Edit Site List..." 5. Click on Add and Paste the URL into the "Location" text box then click OK 6. Click continue on below screen 7. Click OK on Java Control Panel and reload the page. Also read: ADOP (R12.2 Online Patching) in Oracle EBS (R12) FAQ If You Are On Window 10. For Windows 10 with IE 11 JRE 1.8.0_51 (64-bit) and higher JRE 1.7.0_85 (64-bit) and higher Disable Smart Screen Follow website (for instructions on how to disable Smart Screen in Windows 10 If this didn't work for you, go on to the next suggestion. Enable App Side-loading Open up the Settings app, and navigate to Update & Security > For Developers Toggle Side-load apps If this doesn't work, go on to the final suggestion If you still unable to access then please do check the following First of all, having so many versions of Java will cause issues with Oracle Forms, our suggestion would be is to reduce the Java to just one, say JRE 1.8.0_21 and uninstall the rest, it is always better to install only the 32 bit Java versions unless you have other application compatibility issues. In case of IE error, carry out the same action plan which we did for adding security in JRE1.8 as well, that will solve the issue, please note that a restart of the browser is required for the changes to propagate. Also, if you are using Firefox then, Firefox version greater than V52.0 which doesn't support Oracle forms, so kindly uninstalls Firefox and then install a 32-bit Firefox of version 49 or 50. This will ensure that the forms are opened properly in Firefox. After performing the above steps we were able to access Oracle Forms successfully without any issue. This post is from our Oracle Apps DBA (R12.2) Training, in which we cover Architecture & Changes in Oracle E-Business Suite R12.2, Staging & Installation, File System & Important Files in R12.2, Start/Stop, Patching, AD Administration, Cloning, Concurrent Managers, AutoConfig, Password Management, and Troubleshooting and much more Related/Further Readings Next Task For You We cover Oracle E-Business R12.2 Architecture & concepts in our Oracle Apps DBA For Beginners Training along with the Installation, Patching, Cloning, and Troubleshooting and also, Database upgrade to 19c and much more including the hands-on labs you must perform to upgrade your skills and get a good job with a high package. Begin your journey towards becoming an Apps DBA by joining our FREE Masterclass on How To Learn Oracle Apps DBA (R12) & It's New Features.
